WORK EXPERIENCE

Short Trip, Goose Creek, SC — *Information Technology Intern* Jun 2024 – Dec 2024

- Developed and maintained backend management applications using Google AppSheets to streamline business operations and improve workflow organization, demonstrating creativity in problem-solving.
- Collaborated with the team to transition the app's backend to a SQL database, beginning with dbdiagram modeling to structure the database design, ensuring data integrity and efficient access.
- Assisted in the planning and implementation of database architecture to support the app's scalability and functionality, leveraging knowledge of relational databases such as SQL.

PROJECTS

Lethal Company Modpack Installer — *Personal Project* July 2024

- Created a mod installer for Lethal Company, simplifying mod installation and management with an intuitive UI and automatic dependency handling, showcasing creativity and user-centric design.
- Used Python and PyQt to develop the interface and backend, ensuring seamless functionality and robust performance.
- Integrated Google Drive API for cloud storage and version control of mods, demonstrating proficiency in API integration and cloud-based solutions.
- Packaged the application for easy deployment and sharing, ensuring a smooth user experience.

DegreeAudit — *UofSC Software Development – CSCE247* Jan 2024 – May 2024

- Collaborated with "The Aisle Devs" team to create a system that allows students to track their academic progress and view degree-related information.
- Contributed to both back-end and front-end development, ensuring seamless integration between data management and user interface, utilizing Java and Git for version control.
- Worked together with the team on all aspects of the project, including planning, coding, testing, and deployment, using Java, Git, and SceneBuilder in an Agile environment.
- Coordinated tasks to meet deadlines and ensured that the project met the objectives set by the team, demonstrating strong organizational skills and a commitment to project success.

F1Telem — *Personal Project* December 2025

- Built a Windows desktop application to capture real-time F1 25 UDP telemetry (speed, throttle, brake, steering, gears, DRS) during Time Trial sessions, applying object-oriented coding principles.
- Implemented distance-normalized lap processing to enable accurate telemetry comparison across laps regardless of lap time, demonstrating analytical thinking and problem-solving skills.
- Automated lap detection, statistics computation, and export of clean, structured JSON for analysis and visualization, leveraging coding skills for data processing.
- Designed a WPF UI with user-selected save locations and on-demand lap downloads for streamlined workflow, enhancing user experience through thoughtful design.

Midnight on Main — *UofSC Game Development – CSCE552* October 2025 – December 2025

- Developed a first-person 3D stealth puzzle game in Godot featuring exploration, puzzle-solving, and enemy avoidance mechanics, demonstrating creativity in game design.
- Implemented core gameplay systems including player movement, interaction, sprinting, saving/loading progress, and win/loss conditions, applying object-oriented coding principles.
- Designed and integrated custom 3D environments, animations, and assets created in Blender, alongside original audio, showcasing a blend of technical and artistic skills.
- Collaborated in a three-person team to deliver a complete, polished game project for an academic 3D game development course, working effectively within an Agile framework.

EDUCATION

University of South Carolina, Columbia, SC Aug 2022 - May 2026

Bachelor of Science in Computer Science

Minor in Business Administration

RELEVANT TECHNICAL SKILLS

Computing Languages and Technologies – Java, Python, C++, JUnit, Linux, Windows, Kotlin, Git, RestAPI, SpringBoot, HTML, CSS, JavaScript, React, SQL, GodotScript, FastAPI, MinIO, JWT, C#, JSON, .NET 8 , Docker, PostgreSQL, MySQL
